ENZADENT™ ENZYMATIC TOOTHPASTE

Vétoquinol USA

FOR VETERINARY USE ONLY

for Dogs & Cats

Directions: Use an Enzadent Dual-Ended Toothbrush or Fingerbrush to apply daily or as directed by your veterinarian.

Warning: KEEP OUT OF REACH OF CHILDREN.

Store at controlled room temperature 59-86°F (15-30°C).

DUAL-ENDED TOOTHBRUSH for DOGS & CATS

Dual-Ended Bristles Specially Designed to Help Remove Plaque and Food Debris.

Directions: Toothbrushing is an important step in maintaining the oral health of your pet. For best results, brush 3-4 times per week using Enzadent Enzymatic Toothpaste. Your veterinarian may give you specific directions. Follow his or her advice closely.

FINGERBRUSH KIT FOR DOGS & CATS

Directions: Slide the Fingerbrush over your finger and apply a small amount of Enzadent Enzymatic Toothpaste onto the bristles. Gently slide your finger inside your pet's cheek and brush along the teeth and gumline.

TOOTHBRUSH KIT FOR DOGS & CATS

Dental Awareness: Taking care of your pet's teeth is, in many ways, the same as taking care of your own. Brushing food debris and plaque from the teeth and gumline can greatly reduce the chance of tartar build-up. While dry, crunchy foods, chew toys or treats, can help clean some of a pet's teeth, they do not effectively clean at or under the gumline, where the most serious problem of periodontal (gum) disease begins. It is gum disease,

not cavities, which most compromises the oral health in pets. Toothbrushing is the most effective method of cleaning a pet's teeth at the gumline.

Directions: For pets new to brushing, using the Enzadent Fingerbrush may be a more readily-accepted method initially. This method will help your pet become familiar with your hands in and near their mouth area. Since the cleansing action of the bristle-styled, Enzadent Dual-Ended Toothbrush will provide optimum cleaning results, it is ultimately what you will want to use. The Fingerbrush offers an ideal "stepping stone" to this method.

Apply a small amount of Enzadent toothpaste on to the brush. Gently, pull the lip up exposing the teeth. In a circular motion, brush along the gumline. Brush only a few teeth the first time and increase the amount each time you brush as your pet becomes more familiar with the process.

Your veterinarian may give you specific instructions. Follow this professional advice closely.

Ingredients: Triple Enzyme System contains Glucose Oxidase, Lactoperoxidase, Lysozyme and Lactoferrin. Also contains: Sorbitol, Hydrated Silica, Calcium Pyrophosphate, Calcium Carbonate, Purified Water, Flavor, Glycerin, Pectin, Calcium Lactate, Titanium Dioxide, Sodium Benzoate, Potassium Thiocyanate, Zinc Gluconate, Tocopheryl Acetate.
