XENODINE® SPRAY

V.P.L.

Active Ingredient(s): Iodine - 1%.

Indications: Topical antiseptic/disinfectant for use on horses, dogs and farm animals.

To aid in wound healing and in prevention of topical bacterial and fungal infections. These include wounds, cuts, abrasions, ears, hooves, udders, declaws, ear cropping, naval dipping, tail docking, castrations, and surgical site preparations.

Dosage and Administration: Cleanse affected areas thoroughly and apply XENODINE® two or three times daily, or as needed. Apply a sufficient amount to cover the affected area. For more rapid release of the active ingredient, XENODINE® must be applied to a moist surface. The wound site may be covered or bandaged after application. When using the pump spray, adjust the nozzle by turning counter clockwise approximately 1/4 turn or until the desired spray pattern is obtained. Hold the container 10 to 12 inches (25 to 30 cm) from the skin.

In case of deep or puncture wounds or serious burns, additional or alternative therapy may be warranted. If redness, irritation or swelling persists or increases, discontinue use and consult your veterinarian.

Contraindication(s): This product should not be used on cats or kittens.

Precaution(s): Store at room temperature; avoid excessive heat 104°F (40°C).

Cold temperatures below 40°F (4°C) may make XENODINE® Solution difficult to spray. Place the bottle in warm water or hold at room temperature until the solution flows freely.

Caution(s): For external use only. Do not allow animals to consume product or lick at site of product application.

Note: When used on or near the teats or udders of dairy animals, the teats and udders should be thoroughly washed before the next milking to prevent contamination of milk.

Warning(s): For veterinary use only. Keep out of reach of children.

Presentation: 12 fl oz (360 mL).

NAC No.: 11430401
